

## ESTIMATES IN TEOWIN®

Estimates in TEOWIN® is one of the two basic modules or the TEOWIN® design product suite. One of its feature performances is the automatic generation and valuation of estimates, based on the 3d designs created previously.

With TEOWIN® estimates you will be able to:

- Minimize drastically the time inverted in each of your projects
- And present your projects in an impeccable form

Here are some of the basic functionalities in TEOWIN® Estimates:

### Characteristics of the estimates module in TEOWIN®

- Calculation of entries based on bill of material of the various articles, comparatives, mathematical and trigonometrically functions etc. According to user preferences
- Valuation (cost) analysis: Cost price, sales price and benefit
- Calculate sales price based on prices in points or direct prices
- Prices based on points with increments per model, client or customer zone.
- General discounts, per chapter, per client, per type of client, per family or per article.
- Multi currency.
- Multi language.
- Possibility to group several I entries in one chapter to obtain different presentations: detailed with or

## **ESTIMATES IN TEOWIN®**

- without price, without details, totals at the start or at the end.
- Changes to the total of the estimate through the application of an increment in percentage of fixed having its effect on previously selected chapters.
- Standard letter of presentation to the estimate.
- User definable configuration of the estimate and the cost analysis.
- Automatic generation of purchase orders per estimate.
- Send Purchase orders directly to the manufacturer per fax or email.
- Option to visualize the estimate in points
- Automatic generation of personalized descriptions in which you can detail for every chapter the appearance of certain articles
- Automatic substitution of elements through changes of model or finish.
- Possibility to add personalized questions at the start of the project for common articles with automatic changes.
- Detection of furniture not corresponding to standard measurements and detection of special parts (parts that need to be cut)
- Special screen for rapid introduction of articles

- Possibility to work with various customers
- Benefits per chapter taking into account cost and sales price
